BODY SERIES

ORIGINAL

This model will surely appeal to players who prefer to have battles in confined spaces. It is a small laser tag submachine gun based on G&G's ARP 9 strikeball model. The weapon is based on the AR-15 model. An extended magazine for 9mm pistol cartridge was added. The game et has a short barrel with a M-LOCK foregrip and sliding buttstock. The designers made a small and convenient model– a perfect close combat weapon. The model does not have any prototypes in the world, but at the same time has a right to exist, because the weapon based on the AR-15 platform with a 9 mm cartridge is quite popular.

Headband ALPHATAG

Weight

0,2 kg

In the ALPHATAG headband, the shape is completely revised. The new anatomical design eliminates pressure on the ears, so the device is not felt on the head even after hours of playing. The sensors of the armband are lower in height in comparison with the sensors on classic armbands and have a hexagonal shape with a branded engraving. Each defeat sensor has an ultra-bright LED and a vibration motor. When hit, only those sensors that have received an IR pulse will vibrate. The player will always understand from which side the shot was fired at him, and will be able to quickly react to the hit. The ALPHATAG headband has a unique photo sensor with a sensitivity angle of 140 degrees. This means that the bandage will accurately detect even a weak IR pulse. No arguing about who hit who. Only the cold-blooded honesty of electronics. And there are two control units on the armband, one of which has an OLED display. The charge level, the progress bar when updating the firmware, the status display – all this is already available in the 11-generation headband.

Basic first aid kit

Dimensions
22x11x8cm

Weight
0,48kg

Battery life
up 36 h

The basic first aid kit restores health, ammunition and revives players. Usually located at the base of the team. The device can be placed on the floor or fixed on the wall.

Crater Laser tag Bomb

Dimensions
< 22,5x10,5x6cm >

Weight
0,5kg

Battery life
up 36 h

The Crater laser tag bomb has an anti-cheat system, it is equipped with a seven-segment indicator and is packed in a shockproof body. The game set has a simple and clear functionality. With the help of the device, you can implement «plant the bomb» scenarios, which will diversify laser tag club games.

DIGITAL FLAG LASERWAR

Dimensions

606x330mm

Weight

2,75kg

Battery life

12h **max. 24h**

One device – lots of possibilities. When the player shoots at the digital flag, his bandage starts flashing, showing that the fighter carries a tag. The owner of the tag must reach his flag and shoot at it to finish the round. If the game objective is to score the maximum number of flags, the winner will be determined at the end of game time. The material is an impact-resistant polymer + polycarbonate. OLED display with a diagonal of 1.5 inches. Built-in Wi-Fi module.

The M4 "SHARK" is a NATO-based M4 assault rifle with a hexagonal M-LOK forearm for the entire length of the barrel. The tube of the optical system visually continues the line of the forearm, perfectly fitting into the design of the weapon. The weapon has fully integrated electronics. Turn on the weapon by using the safety catch. The button is responsible for reloading.
